CampusSaathi – Your Campus, Your Language, Your AI Companion

Project by: Ritika Somagoni
Institution: BVRIT Hyderabad College of Engineering for Women

Problem Statement

Students often spend time searching for college-related information, including placement details, examination updates and general campus information. Accessing this information can be difficult, especially when students prefer interacting through their regional languages.

Proposed Solution

CampusSaathi is a multilingual, voice-enabled campus assistant that allows students to ask college-related questions naturally and receive answers in English, Telugu or Hindi.

Key Features

- Voice-based interaction with students.
- Multilingual speech recognition in English, Telugu and Hindi.
- College FAQ-based information retrieval.
- Spoken responses using text-to-speech.
- Simple and accessible web interface.

Technology Stack

- Frontend: HTML, CSS and JavaScript
- Backend: Python and FastAPI
- Speech-to-Text: Gnani Prisma API
- Text-to-Speech: Gnani Timbre API
- Deployment: Render
- Version Control: GitHub

How It Works

1. A student asks a question using their voice.
2. Gnani Prisma converts speech into text.
3. CampusSaathi identifies the relevant college FAQ and retrieves an answer.
4. Gnani Timbre converts the answer into speech.
5. The student receives both a text and audio response.

Impact and Future Scope

CampusSaathi aims to make college information easier to access through natural multilingual voice interaction. Future improvements include expanding the FAQ database, improving question matching and integrating more campus information sources.
